Description of Indicator: Hypsometric Structure (Altitudinal Zonality) of municipalities and settlements provides an insight into the share (%) of defined hypsometric classes (< 200 m a.s.l., 200–500 m a.s.l., 500–800 m a.s.l., 800–1000 m a.s.l., 1000–1500 m a.s.l., > 1500 m a.s.l.) in total area of settlements. These data allow morphological structuring of settlements and based on it is possible to establish the relationship between area altitude and settling, as well as the extent to which the morphometric of the terrain is a driving factor of population distribution.
